NNFE & Industry:

Delivering C5ISR, Space and Business Capabilities at the Right Time and Cost

This year's theme for the 12th annual "Naval NETWAR FORCEnet Enterprise and Industry Conference" formerly known as the "SPAWAR Industry Conference," is *NNFE & Industry: Delivering C5ISR, Space and Business Capabilities at the Right Time and Cost*.

For the third consecutive year, the Program Executive Office for Command, Control, Communications, Computers, Intelligence (C4I) and the Naval Network Warfare Command (NETWARCOM) will join SPAWAR and the National Defense Industrial Association San Diego Chapter in presenting the conference that has grown to be the major West Coast symposium for discussing joint C5ISR - Command, Control, Communications, Computers, Combat Systems, Intelligence, Surveillance, and Reconnaissance - issues facing the warfighter.

Senior officials from these commands will share their perspective on how the Naval NETWAR FORCEnet Enterprise (NNFE) collectively enhances the delivery of network centric operations to the fleet and the Joint Warfighter. The NNFE includes NETWARCOM as the requirements lead, OPNAV (N6) as the resource sponsor and TEAM SPAWAR (including PEO C4I, PEO Space Systems and PEO Enterprise Information Systems) as the provider of capability.

The two-day conference will conclude with NDIA San Diego Chapter's annual Awards Banquet where the chapter will recognize individuals who have made extraordinary contributions to the Fleet, the Reserve and the Guard.

"The NNFE and Industry Conference" will provide a forum for discussion of acquisition strategies and upcoming business opportunities for both large and small businesses. This conference will continue to provide opportunities for networking with senior government officials and a broad spectrum of industry representatives.

Detailed information and registration on the 2007 NNFE & Industry Conference Web Site.
